

# Bogdan Spytskyi

*Junior ReactJS Developer*

## Summary

---

I got acquainted with the IT world at school (Pascal, html, css). I entered the university for "information security". At the university I got acquainted with the programming languages C/C++, Python, JS, Assembly. Implemented a couple of projects on the Django framework [1](#), [2](#). I am currently doing front end development using the React framework. And I want to further develop in this area.

## Experience

---

**Moderator/developer – 25.08.20 to 24.03.22**

**KINGSTAR**, Moscow

- Wholesale and retail company of sports nutrition and clothing KingStar.
- Support site, adding user interfaces.

**Implemented a [social networking](#) project.**

- I made [my own Redux](#) to better understand how the library works, later I worked with react-redux.
- Project built on FLUX architecture.
- The social network used the following libraries: axios, react-redux, redux-form, redux-thunk, react-test-renderer, type-script.
- In the future I plan to add: formik, reselect.
- [Backend API](#).

## Education

---

MIREA University. Information security specialist.

## Contact

---
